# Title: Student Accommodation Finder – Affordable Housing CRM

Industry: Real Estate / Education Services

**Project Type**: B2C Salesforce CRM Implementation

Target Users: Students, Property Owners, Customer Support Agents, Managers

#### **Problem Statement**

Many students studying outside their hometown struggle to find affordable and reliable accommodations. Current processes are fragmented:

- Students rely on multiple third-party apps, word of mouth, or brokers.
- Property availability, pricing, and amenities are not transparent.
- There's no proper request tracking for booking, complaints, or cancellations.
- Support agents manually assign cases leading to delays.
- Managers lack visibility into demand trends, property occupancy rates, and service quality.

The company wants a Salesforce CRM solution to:

- Automate booking and complaint management.
- Maintain centralized student and property records.
- Provide real-time notifications (SMS/Email) to students.
- Offer a self-service portal for students to search and request rooms.
- Enable managers to track occupancy, complaints, and service performance.

# **Use Cases**

#### 1. Student Management

- Maintain centralized student profiles with contact info and current accommodation details.
- Track active and past bookings linked with each student.

#### 2. Property & Room Management

- Store property details: Name, Location, Room Type (Single/Shared), Rent, Facilities.
- Link available rooms to their respective property owners.
- Automatically update room status (Available → Booked → Vacant).

# 3. Booking & Complaint Requests

- Students raise **booking requests** for available rooms.
- Students can raise **complaint requests** (maintenance, cleanliness, facilities).
- Requests automatically assigned to agents based on availability.
- Agents update request status (Open → In Progress → Closed).

# 4. Booking Confirmation & Cancellation

- On booking confirmation → CRM auto-sends SMS/Email with details.
- On cancellation → Room status is auto-updated to **Vacant**.

# 5. Reporting & Analytics

**Reports:** Bookings by Property, Complaints by Type/Priority.

**Dashboard:** Occupied vs Vacant Rooms (Occupancy Analysis).

Student Trends: Active students, cancelled bookings.

Agent Performance: Requests resolved per agent.

# **Tech Stack**

**Salesforce CRM** (Service Cloud + Experience Cloud)

Custom Objects: Student, Property, Room, Booking, Complaint

Automation: Assignment Rules, Flows for booking confirmation & cancellation

**Notifications:** Email & SMS Alerts

Dashboards & Reports: For occupancy, booking, and complaints
